

Strange Prop Thingy

This is the RMC-023, the model for January, 2014. It consists of three materials zone, a **SPHERE** attached to a **SHAFT** with a **BASEPLATE**. I'm not really sure what it's good for so I'm hoping you will all help me figure that out.

A template for the **SPHERE** has been included along with a PDF file detailing how to use it.

Have fun. I look forward to seeing what you think it is!
